

## **Defending Wilhelm Reich's Work on Genitality, and the Rights of Heterosexual Youth**

In the context of private discussions on-going among orgonomic professionals who accept the factual nature of Dr. Wilhelm Reich's concepts on genitality and sex-economy, I would like to introduce the excellent work of Dr. Stuart Brody, Professor of Psychology currently at the University of West Scotland, and his various associates. For years, they have been pioneering a line of investigation similar to Reich's, thereby providing a substantial support for Reich's original findings.

Brody's (et al) research provides a powerful confirmation of Reich's original clinical findings and uncompromised views on the superior psychic and somatic health benefits of heterosexual genitality ("Penile Vaginal Intercourse" or "PVI" as Brody calls it), as compared to all other forms of sexual discharge (homosexuality, bi-sexuality, masturbation, oral-anal climaxes, whippings, group-sex, poly-sex, sex with prostitutes, rape, etc.). This is of course a serious challenge to the Kinsey-oriented modern "sexual science" which is sustained mostly by powerful interest groups lobbying through governments for legal standing on a variety of sex-pathological fronts. Brody's research also challenges some conventional views about "AIDS", that it is generally not transmissible by heterosexual genital intercourse, and also shows female vaginal orgasm is a higher indicator of woman's health than clitoral climaxes, just as with men the ejaculatory reaction does not constitute an "orgasm" per se, and when obtained by non-genital activity imparts only a shadow of the health benefits of PVI, or genital heterosexual intercourse. For full details on this, read Reich's *Function of the Orgasm*. It is still a light-year ahead of most of what's found in the modern textbooks.

Here is a list of what I feel are the most critical of Brody et al's research papers, with weblinks where the abstracts or full papers may be downloaded from internet. A review of the titles alone is illustrative (organized chronologically, most recent first):

Brody, S., & Klapilova, K., Lucie Krejová (2013). More Frequent Vaginal Orgasm Is Associated with Experiencing Greater Excitement from Deep Vaginal Stimulation

To wit: **All other factors being equal**, and within the context of our still relatively sex-negative Western liberal-democratic cultures (suffering under both puritanical-moralistic and licentious-pornographic variations of sexual disturbance) neither anal nor oral copulations leading to climax-

discharge or ejaculations are comparable in health benefits to male-female genital intercourse with full orgasm. And full orgasm is only possible, as Reich detailed, when one can fully "let go" with a trusted and loved partner in a safe setting, and especially for the woman where the risk of unwanted pregnancy is eliminated through contraception. This is so, irrespective of other factors related to sexual anxiety which are still quite universal. Such anxiety is also at high levels (but masked) among the "fuck-freely" and "swinger" pornographic culture, which suffers from a great deal of orgasmic impotence (from the Reichian definition) without much gratification... and this lack of gratification is what drives those groups into such frantic behavior. Likewise with masturbation, as it applies to adult populations, the clinical evidence supports Reich. It is basically harmless for children exploring their bodies. When chronic for older teens and adults, masturbation can become an avoidance mechanism for male-female pair bonding. Likewise, no amount of anal or oral sex can give the same gratification as heterosexual genitality. No matter what the sexual practices or techniques, Reich's *genitality* remains the gold-standard, and it is intrinsically heterosexual, closely identical to what Brody identifies in his clinical work as *PVI* (penile-vaginal intercourse).

I have already given additional details on the divergence of Reich's ideas from so much of modern "sexual science", which also appears true for Brody, et al's research findings. Modern "sexual research" is today governed more by political sentiments, and predominantly follows the degenerate views of Alfred Kinsey, a masochistic bi-sexual who preferred homosexual relations, and saw no problems with pornography, pedophilia or bestiality. Kinsey's "raw discharge" theory basically "equalized" every kind of sexual expression, no matter how self-centered, coercive, impotent or laden with sado-masochism. His discussions on "orgasm" had little to say about love or emotion, and were therefore completely at odds with Reich's findings and views which emphasized the emotional and gentle-loving context of sexual relations. Kinsey believed that any kind of sexual climax (for men, defined as ejaculation) was "an orgasm", and all were of equal value no matter how they were achieved, even in the sexual abuse of children. Kinsey actually used serial child-rapists as "informants" to obtain "data" on the "time to orgasm" for children between the ages of 6 months to 14 years old. He coached such sexual criminals in how to "gather data" so as to make it usable for his own research. These data are published right in his major books, *Sexual Behavior in the Human Male*, and *Sexual Behavior in the Human Female*, for anyone with eyes to see. Those two very popular books also used extremely sloppy and statistically invalid data-sampling procedures, notably interviewing subjects from prisons, homosexual bars, seedy hotels used by prostitutes, and so forth, with his findings then generalized to ordinary heterosexual people across the USA. Even some of Kinsey's modern biographers have been forced, by the evidence and many public disclosures, to acknowledge these facts.

Unfortunately, Kinsey was lionized and carried forward into society as on a parade with cheering crowds. Publication of his ideas appeared in all the "top" mainstream media, with pop-enthusiastic interviews and his ideas written into public propaganda and new laws. Reich, by contrast, who opposed pornography and considered pedophilia a crime against children, and who also wrote about his observations on homoerotic sadism within the Third Reich, was isolated, shoved aside and treated like dirt. Reich was slandered as a pervert in the same mainstream media which cheered Kinsey, and finally was thrown into a prison cell. His books were burned by the same public media-mob that held Kinsey and friends in such high regard. Today, Kinsey's ugly ideas and past history have been largely cleansed by his own mainstream cheerleaders, while Reich is wrongly tarred and feathered as having supported such things as only Kinsey supported -- the pornography, poly-sex, pedophilia and so on. And Reich was never a "member of the Frankfurt group" of Cultural Marxists, who championed the Kinsey agendas, and not Reich's more decidedly tame Sex-Pol agendas.

Citations and weblinks to original sources, documenting these facts, are found in my new book, *In Defense of Wilhelm Reich*. It is available now from the Amazon, Barnes & Nobel, and ebay websites, as well as from our own on-line booklist:

<<http://www.amazon.com/Defense-Wilhelm-Reich-Mainstream-Defamatory/dp/0980231671/>>

Workers in ergonomics and friends of Reich ignore these factors at great peril to society, as the roots of this problem go very deep into the human character, affecting social reform movements and political freedoms of every sort.
